MOVABLE PROTOCOL ASSISTANT

For more time savings!

With the KENBUN voice app, convert voice to text and share instantly as email or in other messenger apps.

The intelligent voice assistant

- runs on iPhone, iPad and Android devices
- Data protection through server based speech recognition at the customer's site
- runs in any cloud or directly under customer's control for special data protection requirements

Artificial intelligence included!

The system is "self-learning". It can improve itself based on the user's input.

HIGHLIGHTS

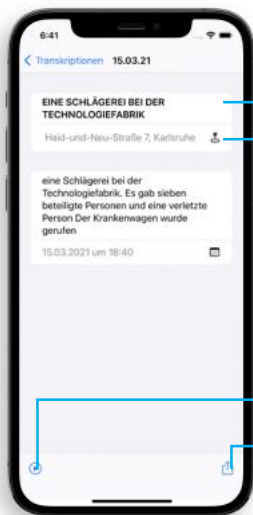

Option:

Under options you can add whole word lists or single words.

Record button:

When you press the red button, the voice recording will start. The speech is immediately transcribed.

Headline and text:

Are manually changeable by keyboard

Location (GPS):

Address is recorded by GPS and can be changed manually (e.g. house number). When you click on the location, the address automatically appears with the street, house number and location.

Audible playback function

Share:

The protocol can be sent to other apps as well as via email.

Delete:
