Speech Recognition

Data protection DSGVO

FOR THE PATROL SERVICE

Time saving through Voice

Police officers can perform documentation immediately and directly at the scene of the incident through voice input. Can be connected directly to the police servers - immediate entry in the IT system

The intelligent voice assistant

- runs on iPhone, iPad and Android devices
- Speech transcription can be implemented in radios
- high level of data protection through server-based speech recognition at the customer's site
- runs in any cloud or, in case of special data protection requirements, directly under the customer's sovereignty

Artificial intelligence included!

The system is "self-learning". It can improve itself based on the user's input.

HIGHLIGHTS

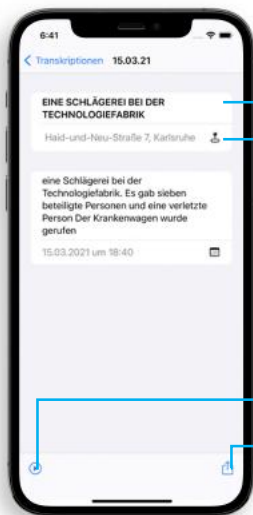

Options:

under options you can add whole word lists or single words.

Recording button:

When you press the red button, the voice recording will start. The speech is immediately transcribed.

Headline and text:

Are manually changeable by keyboard

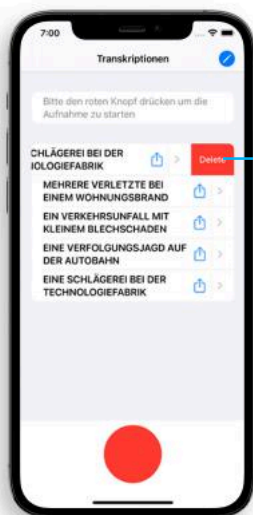

Position localization (GPS):

Address is recorded by GPS and can be changed manually (e.g. house number). When you click on the location, the address automatically appears with the street, house number and location.

Acoustic playback function

Share:

The protocol can be sent to other apps as well as via email.
